

get it running

Shortcut for SAP systems

Faster in projects

Additional security for the Go-Live

Fix problems quickly

Please check terms and conditions, supplied with the download.

There is no installation procedure necessary for using "Shortcut for SAP systems" (Sc4SAP). We recommend to copy the "Sc4SAP" folder coming with this zip file either in the root directory of your computer or in a folder suitable for applications without installation procedures, for example "C:\Tools\" or similar.

Don't place the program files in the 'usual' folders for applications like "C:\Program Files (x86)\\" or "C:\Program Files\", please. Sc4SAP writes data in some subfolders like "properties" and "variants" and needs full write access to these folders.

It is even possible to run Sc4SAP from a mobile data medium such as a USB stick. Have a look at the "System requirements.txt" file, please.

In case you have multiple products (for example, the "User Admin" and the "Data Manager"), we recommend putting them all into the same directory. All of them come in a ZIP file with a folder "Sc4SAP".

When adding a product or replacing an existing one (e.g. with a newer version), just integrate the files and folders into the existing ones.

You will find these executables in this directory (depending on the product):

| | |
|------------------------|---|
| Sc4SAP.exe | This is the GUI application as the main part of our "All In" product. |
| Sc4SAPUserAdmin.exe | This is the GUI application as the main part of our "User Admin" product. |
| Sc4SAPEm+GoLiveKit.exe | This is the GUI application as the main part of our "Emergency + Go-Live Kit" product. |
| Sc4SAPDataAdmin.exe | This is the GUI application as the main part of our "Data Admin" product. |
| Sc4SAPCmd.exe | This is a command line tool that allows you to run the functions in the background and in automation scenarios. |
| Sc4SAPStarter.exe | This program checks whether all requirements on your computer are given (e.g. Java Runtime Environment and SAP Java Connector). |

Starting the application the **first** time should be done using the supplied "Sc4SAPStarter.exe" program. This program checks whether all requirements are given. When all system requirements are given you can start the application directly by executing "Sc4SAP.exe" (resp. "Sc4SAPUserAdmin.exe", "Sc4SAPEm+GoLiveKit.exe", "Sc4SAPDataManager.exe" - depending on the product).

When starting our product successfully the first time it should look similar to this:

If there are no graphics visible (nearly each button should have a graphic), the reason is probably due to a setting other than 100% in the "Scale and layout" settings in Windows 10. To fix this, do the following: in the Windows Explorer, *right* click on "Sc4SAP.exe" (resp. the GUI program of the purchased product) > go to "Compatibility" tab > check "Override high DPI scaling behavior" and select "Scaling performed by: System".

In December 2021 a security gap in the logging component "log4j" was detected (see <https://nvd.nist.gov/vuln/detail/CVE-2021-44228>). This logging component is also used in "Shortcut for SAP systems". However, as the security gap is relevant for server-based applications, this issue never did apply for "Shortcut for SAP systems". Nevertheless, with this version a log4j version is in use, which does not contain this vulnerability. If a previous version of "Shortcut for SAP systems" was installed on your computer, you can delete older files "log4j-api-<version>.jar" and "log4j-core-<version>.jar" in the subdirectory "Sc4SAP_lib". Only the files with the highest version are in use. Possibly existing files with an older version are artifacts from a previously installed version and can be deleted.

For the first steps with our application we recommend to have a look at this article: <https://www.shortcut-it.com/blog/index.php?first-contact>
If you freshly downloaded our application, only few functions are available. Feel free to contact us for getting a [trial license](#), enabling you to discover all the possibilities. You can also use our application to request a trial license:
